Case Study

Transitioning 3 Lac Sq.ft. Myntra HQ into Platinum Green Building

As consultants, we facilitated transition of Myntra's HQ into 100% green power with a combination of Rooftop Solar Power and Power supply via Grid leveraging IndiQube's Solar Farm in Yadgir, Karnataka. Subsequently, We have also helped them achieve Occupant health and well being certification from the IGBC.

Partnership Model for Solar Farm

Rental Model

10% Down Payment

Client shall contribute 10% of open access Solar Farm capex as upfront payment

Fixed Energy Cost for 25 Years

Client will pay monthly rental over 25 years, after which asset ownership transfers to the client.

Maintenance by IndiQube

The monthly rental also covers the AMC / CMC by IndiQube for the entire contract period

Green Power : Farm to Your Location via Grid

An aerial photograph of a solar farm. The solar panels are arranged in long, parallel rows across a green field. The panels are tilted at an angle to maximize sunlight absorption. The surrounding area includes some bare earth, a small utility building, and a road. The text "Solar Farm" is overlaid in the center in a large, white, sans-serif font.

Solar Farm

Partnership Models for Solar Rooftop

Capex Model

100% Upfront Capex

Total Investment is borne by the client

100% Ownership

Post installation, ownership of all assets to rest with the client

Maintenance by IndiQube

2-year AMC for servicing, performance monitoring, & issue resolution

Rental Model

20% Down Payment

Client shall contribute 20% of capex as upfront payment for the installation of the rooftop solar solution

Easy Rental & Ownership Transfer

Client will pay monthly rental over 5-7 years, after which asset ownership transfers to the client.

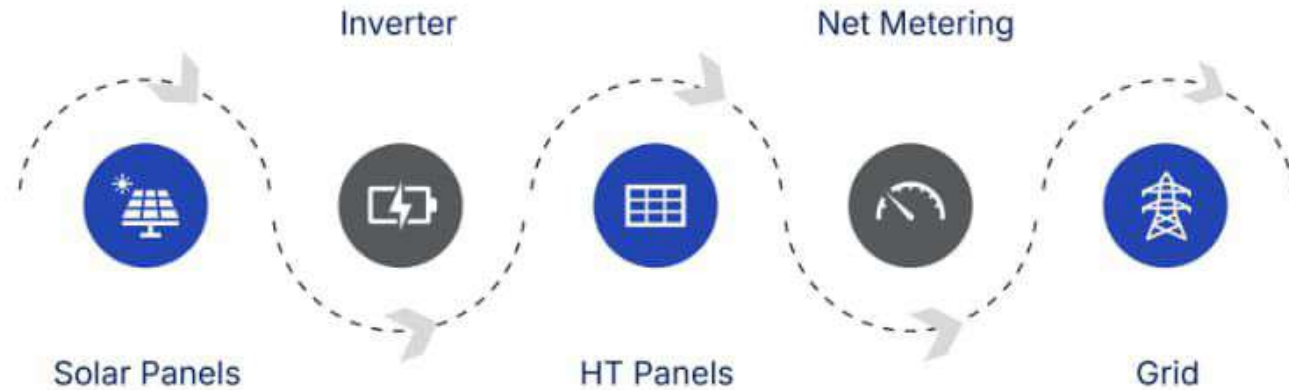

Maintenance by IndiQube

The monthly rental also covers the AMC by IndiQube for the entire contract period

A large-scale photograph of a rooftop solar installation. The foreground and middle ground are filled with rows of blue photovoltaic solar panels mounted on a flat roof. The panels are arranged in neat, parallel rows, creating a strong sense of perspective. In the background, a cityscape is visible under a clear blue sky. Two prominent, tall, modern skyscrapers stand out against the horizon. Other smaller buildings and greenery are scattered throughout the urban landscape. The overall scene conveys a message of sustainable urban development and renewable energy.

Rooftop Solar

Pick Your Solution Basis Your Requirement

Rooftop Solar

Solar Grid

Dual Mode

Understanding the Benefits of Each Solar Approach

Rooftop Solar Solution

Pros

Cons

- Eliminates transmission & wheeling charges
- Lower transmission losses due to on-site generation
- Faster installation and commissioning
- Visible sustainability impact at site level
- Power generation depends on available rooftop area
- May not cover 100% of energy demand
- Generation varies with roof orientation and shading
- Not scalable beyond site limits

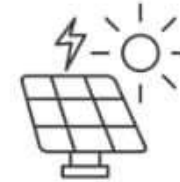

Open Access Solar Farm

Pros

Cons

- Access to large scale solar capacity
- Supports RE100 and ESG commitments
- Delivers stable and predictable power supply
- Ideal for high consumption and multi location operations
- Transmission and wheeling charges apply
- Subject to state level regulatory framework
- Grid dependency for extraction
- Requires long-term, large-scale power commitment

Dual Solar Solution

Pros

- Combines reliability of grid with benefits of rooftop solar
- Optimizes energy costs across multiple sources
- Ensures supply continuity during peak demand
- Future ready approach for growing power needs

IndiQube Solar Advantage

PAN India Deployment

Leveraging a combination of rooftop solar, IndiQube's network of open access solar farms and a wide range of partner networks, we fuel your transition into green power across all your owned or leased locations PAN India

Green Energy Planning

Get a free consultation where we design customized green energy roadmaps tailored for your green energy needs, aligning to your load profiles, energy usage plans, and sustainability goals.

Meter Liaising

We manage end to end coordination with electricity departments across cities for meter approvals, synchronization, and commissioning, enabling a smooth and hassle-free transition to green power.

Ecosystem Partnerships

Through a strong network of partners for open access solar farms across India, we enable scalable and location agnostic green power solutions for enterprises with distributed real estate footprints.

State Level Compliance

We help clients navigate diverse state specific regulations, approvals, and policies, reducing complexity and ensuring compliance across multiple geographies.

Holistic Solar Solutions

From rooftop and open access to hybrid configurations, we offer integrated solutions that address end to end solar requirements across different use cases and load demands.

Proven Expertise

We manage power requirements across 125 properties in 17 cities, bringing deep operational insight and execution excellence at scale.

Marquee Clientele

Fortune 50 companies, global capability centers, and unicorns trust IndiQube to power their green energy transition.

Capex to Opex

Whether you prefer upfront investment or monthly rentals, we offer flexible options that make your transition to solar seamless

Our Comprehensive Solar Solutions Portfolio

Rooftop Solar Solution

- On-site solar power solution that eliminates transmission charges
- Minimizes transmission losses through localized generation

Our Network

25+ Rooftop Projects

Cumulatively Capacity of 5 MW

Open Access Solar Farm

- Caters to commercial properties with large power requirements
- Especially with insufficient rooftop space to meet power requirements

Our Network

30MW Open Access Capacity

Spread across Karnataka, Maharashtra & Tamil Nadu

Dual Solar Solution

- Combines the advantages of both rooftop solar and grid power
- Enhanced efficiency & reliability for commercial establishments.

Best Net Zero Initiative Award

Powering Your Green Transition At Every Touchpoint

Spaces

- Renovation & Upgradation
- IGBC & ISO Certifications
- Landscaping & Indoor Plants
- Energy Efficient Equipment
- Heat Recovery from AC

Commute

- EV Transport Fleet
- Solar Powered EV Charging Stations
- Carpooling solutions via MiQube App

Waste

- Organic Waste Composting
- Biodegradable coffee mugs & stationery
- Recycled Paper for Stationery & Toiletries
- Chemical Free Ozonized Water for upkeep

Water

- Rainwater Harvesting
- Sewage Treatment Plants
- Water Treatment Plants
- Sensors & Efficient fixtures

Power
